SUMMARY

B.Sc. Computer Science (Data Analytics) graduate (2026) with hands-on experience building working software end to end: an AI-powered SaaS product, an autonomous LLM agent, and a Google Summer of Code architecture proposal for a Google-affiliated open-source project. Comfortable across the development lifecycle, including backend APIs, automation, cloud deployment, software design, and software testing.

TECHNICAL SKILLS

Programming Languages: Python, SQL

Data Structures & Algorithms: Arrays, Lists, Conditionals, Loops, Binary Search

AI / Machine Learning: LangChain, LangGraph, Groq API, Cohere API, Llama 3 (Transformer Architecture), Prompt Engineering, Agentic Workflows, NLP (Google Dialogflow)

Software Engineering: Git/GitHub, REST APIs, CI/CD (GitHub Actions), Azure Cloud Deployment, Playwright, Software Design, Software Testing, Test Automation

Productivity Tools: Google Workspace (Sheets, Slides, Docs), Excel Automation

OPEN-SOURCE CONTRIBUTION

API Dash (foss42) — Google Summer of Code 2026 Technical Proposal

2026

- Authored a GSoC 2026 design proposal for API Dash, a 7-layer API Explorer architecture spanning multi-source ingestion, LLM-based enrichment, and full-text search, based on an end-to-end study of the existing codebase (Riverpod, lib/providers, lib/services, lib/importer).
- Refined the proposed LLM Enrichment Engine (auto-tagging, summarization, security-flag detection) and a Completeness Scoring and Moderation Engine design over several review cycles with two GSoC mentors and a Google Developer Expert.
- Documented the proposal with an architecture overview, API reference outline, and a CI/CD and Docker deployment plan for evaluation by the API Dash core team.

PROJECTS

OIRadar — AI-Powered SaaS Platform for NSE Option Chain Analysis

2026 – Present

- Sole developer of OIRadar, an AI-powered SaaS product in active development for NSE NIFTY option-chain analysis, built as a Chrome Extension frontend on a Python/FastAPI backend with Cohere LLM integration for natural-language market querying.
- Automated real-time NSE option-chain data collection with Playwright, feeding 3-minute refresh cycles and 15-minute trend-aggregation reports directly into Google Sheets and Excel for live tracking and analysis.
- Validated product direction by researching trader pain points across Reddit, Kite Connect, and TradingQnA developer communities, shaping the feature roadmap toward a Razorpay-enabled commercial launch.

Python Smart AI Agent — Autonomous LLM Agent with Tool-Use

Python, LangChain, LangGraph, Llama 3, Groq API

- Built an autonomous agent on Llama 3 via the Groq API, combining LangChain and LangGraph for multi-step reasoning with real-time DuckDuckGo search tool-use and persistent conversation memory, so the agent plans, executes, and self-evaluates tasks without human intervention.

ACHIEVEMENTS & RECOGNITION

- Shortlisted, Gemini Student Ambassador Program (Google).

EDUCATION

B.Sc. Computer Science – Data Analytics, Kongunadu Arts and Science College, Coimbatore

2023 – 2026

Graduated: May 2026 | CGPA: 8.0 / 10.0

Relevant coursework: Machine Learning, Deep Learning, Data Science, Data Structures & Algorithms, Database Systems, Data Analytics & Visualisation

CERTIFICATIONS & LANGUAGES

Certifications: Azure AI Fundamentals (Microsoft), Robotic Process Automation – RPA (ICT Academy), Full Stack Development (Microsoft / Coursera)

Languages: Tamil (Native), Kannada (Conversational), English (Professional – Written & Spoken)
